

Google Play Store Apps: Market & Sentiment Insights

1. This dashboard analyzes 7,010 Google Play Store apps to understand market performance, user preference, and sentiment trends.
2. The average app rating is 4.16, showing overall high user satisfaction across the platform.
3. Free apps dominate the market, with 6,470 apps, while paid apps are only 540, yet paid apps show better quality perception with a higher average rating (4.24 vs 4.15).
4. Total installs cross billions, but free apps account for almost all adoption, with 3,135.43 crore installs, while paid apps reach only 4.23 crore installs.
5. Game and Family categories lead in installs, confirming their mass-market appeal.
6. Interestingly, Events apps have the highest average rating (4.48) despite having very low installs and fewer apps, indicating a niche but highly satisfied user base.
7. Dating apps have the lowest average rating (3.96), suggesting user experience challenges despite demand.
8. Family category has the highest number of apps, followed by Games and Tools.
9. User sentiment is largely positive (64.12%), though 22.1% negative sentiment highlights scope for quality and experience improvement.

Key Insight:

High installs do not always mean high satisfaction, and fewer apps can still achieve stronger user trust and ratings.
